Studiengang: Bachelor  Master

Please fill in your name above and tick exactly one box for the right answer of each question below.

1. What is the probability density function (PDF)  $p_X(x)$  for a normally distributed random variable  $X$  with mean  $\mu$  and variance  $\sigma^2$ ? The answer is  $p_X(x) = \frac{1}{\sqrt{2\pi\sigma^2}} \dots$

(a) <input type="checkbox"/> $e^{\frac{(x-\mu)^2}{2\sigma}}$	(b) <input type="checkbox"/> $e^{-\frac{(x-\mu)^2}{2\sigma}}$	(c) <input type="checkbox"/> $e^{\frac{(x-\mu)^2}{2\sigma^2}}$	(d) <input type="checkbox"/> $e^{-\frac{(x-\mu)^2}{2\sigma^2}}$
--------------------------------------------------------------	---------------------------------------------------------------	----------------------------------------------------------------	-----------------------------------------------------------------

2. What is the PDF of a variable  $Z$  with uniform distribution on the interval  $[c, d]$ ? For  $x \in [c, d]$  it has the value:

(a) <input type="checkbox"/> $p_Z(x) = (d - c)$	(b) <input type="checkbox"/> $p_Z(x) = (c - d)^2$	(c) <input type="checkbox"/> $p_Z(x) = \frac{x}{\sqrt{d-c}}$	(d) <input type="checkbox"/> $p_Z(x) = \frac{1}{d-c}$
-------------------------------------------------	---------------------------------------------------	--------------------------------------------------------------	-------------------------------------------------------

3. What is the PDF of an  $n$ -dimensional normally distributed variable  $Z$  with zero mean and covariance matrix  $\Sigma \succ 0$ ? The answer is  $p_Z(x) = \frac{1}{\sqrt{(2\pi)^n \det(\Sigma)}} \dots$

(a) <input type="checkbox"/> $e^{-\frac{1}{2}x^T \Sigma x}$	(b) <input type="checkbox"/> $e^{-\frac{1}{2}x^T \Sigma^{-1} x}$	(c) <input type="checkbox"/> $e^{\frac{1}{2}x^T \Sigma x}$	(d) <input type="checkbox"/> $e^{\frac{1}{2}x^T \Sigma^{-1} x}$
-------------------------------------------------------------	------------------------------------------------------------------	------------------------------------------------------------	-----------------------------------------------------------------

4. Regard a random variable  $X \in \mathbb{R}^n$  with mean  $d \in \mathbb{R}^n$  and covariance matrix  $\Sigma \in \mathbb{R}^{n \times n}$ . For a fixed  $a \in \mathbb{R}^m$  and  $A \in \mathbb{R}^{m \times n}$ , regard another random variable  $Y$  defined by  $Y = a + AX$ . What is the mean  $\mu_Y$  of  $Y$ ?

(a) <input type="checkbox"/> $Y - a + AX$	(b) <input type="checkbox"/> $a + Ad$	(c) <input type="checkbox"/> $AXX^T A^T$	(d) <input type="checkbox"/> $a^T Ad + d^T \Sigma d$
-------------------------------------------	---------------------------------------	------------------------------------------	------------------------------------------------------

5. Above in Question ??, what is the covariance matrix of  $Y$ ?

(a) <input type="checkbox"/> $d^T \Sigma d$	(b) <input type="checkbox"/> $A \Sigma A^T$	(c) <input type="checkbox"/> $A^T \Sigma^{-1} A$	(d) <input type="checkbox"/> $A \Sigma^{-1} A^T$
---------------------------------------------	---------------------------------------------	--------------------------------------------------	--------------------------------------------------

6. Above in Question ??, which statement is true?  $\text{Cov}(Y) =$

(a) <input type="checkbox"/> $Y^T Y - \mu_Y^T \mu_Y$	(b) <input type="checkbox"/> $\mathbb{E}\{YY^T\} - \mu_Y \mu_Y^T$
(c) <input type="checkbox"/> $YY^T - \mu_Y \mu_Y^T$	(d) <input type="checkbox"/> $\mathbb{E}\{Y^T Y\} - \mu_Y^T \mu_Y$

7. (\*) Above in Question ??, what is the mean of the matrix valued random variable  $Z = YY^T$ ?

(a) <input type="checkbox"/> $(a + Ad)(a + Ad)^T$	(b) <input type="checkbox"/> $aa^T + Add^T A^T + A \Sigma A^T$
(c) <input type="checkbox"/> $(a + Ad)(a + Ad)^T + A \Sigma A^T$	(d) <input type="checkbox"/> $aa^T + Add^T A^T$

8. A scalar random variable has the standard deviation  $y$ . What is its variance?

(a) <input type="checkbox"/> $\sqrt{y}$	(b) <input type="checkbox"/> $y^2$	(c) <input type="checkbox"/> $y$	(d) <input type="checkbox"/> $y^{-1}$
-----------------------------------------	------------------------------------	----------------------------------	---------------------------------------

9. A scalar random variable has the variance  $w$ . What is its standard deviation?

(a) <input type="checkbox"/> $w$	(b) <input type="checkbox"/> $w^{-1}$	(c) <input type="checkbox"/> $w^2$	(d) <input type="checkbox"/> $\sqrt{w}$
----------------------------------	---------------------------------------	------------------------------------	-----------------------------------------

10. Regard a random variable  $\beta \in \mathbb{R}$  with zero mean and variance  $\sigma^2$ . What is the mean of the random variable  $z = \beta^2$ ?

(a) <input type="checkbox"/> $\beta + \sigma^2$	(b) <input type="checkbox"/> $\sigma$	(c) <input type="checkbox"/> $\sigma^2$	(d) <input type="checkbox"/> $\beta + \sigma$
-------------------------------------------------	---------------------------------------	-----------------------------------------	-----------------------------------------------

11. (\*) Regard a random variable  $X \in \mathbb{R}^n$  with zero mean and covariance matrix  $\Sigma$ . What is the mean of  $Z = X^T X$ ?

(a) <input type="checkbox"/> $\ \Sigma\ _F^2$	(b) <input type="checkbox"/> $\det(\Sigma)$	(c) <input type="checkbox"/> $\ \Sigma\ _2^2$	(d) <input type="checkbox"/> $\text{trace}(\Sigma)$
-----------------------------------------------	---------------------------------------------	-----------------------------------------------	-----------------------------------------------------

12. What is the minimizer  $x^*$  of the convex function  $f : \mathbb{R} \rightarrow \mathbb{R}$ ,  $f(x) = e^x - 2x$  ?

- |                                         |                                        |                                                |                                        |
|-----------------------------------------|----------------------------------------|------------------------------------------------|----------------------------------------|
| (a) <input type="checkbox"/> $x^* = -1$ | (b) <input type="checkbox"/> $x^* = 1$ | (c) <input type="checkbox"/> $x^* = \log_e(2)$ | (d) <input type="checkbox"/> $x^* = 0$ |
|-----------------------------------------|----------------------------------------|------------------------------------------------|----------------------------------------|

13. What is the minimizer  $x^*$  of the convex function  $f : \mathbb{R} \rightarrow \mathbb{R}$ ,  $f(x) = \alpha + \beta x + \frac{1}{2}\gamma x^2$  with  $\gamma > 0$  ?

- |                                                            |                                                            |                                                             |                                                            |
|------------------------------------------------------------|------------------------------------------------------------|-------------------------------------------------------------|------------------------------------------------------------|
| (a) <input type="checkbox"/> $x^* = \frac{2\beta}{\alpha}$ | (b) <input type="checkbox"/> $x^* = -\frac{\beta}{\gamma}$ | (c) <input type="checkbox"/> $x^* = -\frac{\beta}{2\gamma}$ | (d) <input type="checkbox"/> $x^* = -\frac{\beta}{\alpha}$ |
|------------------------------------------------------------|------------------------------------------------------------|-------------------------------------------------------------|------------------------------------------------------------|

14. What is the minimizer of the convex function  $f : \mathbb{R}^n \rightarrow \mathbb{R}$ ,  $f(x) = \|y - \Phi x\|_2^2$  (with  $\Phi$  of rank  $n$ ) ? The answer is  $x^* = \dots$

- |                                                           |                                                           |                                                          |                                                          |
|-----------------------------------------------------------|-----------------------------------------------------------|----------------------------------------------------------|----------------------------------------------------------|
| (a) <input type="checkbox"/> $-(\Phi\Phi^T)^{-1}\Phi^T y$ | (b) <input type="checkbox"/> $-(\Phi^T\Phi)^{-1}\Phi^T y$ | (c) <input type="checkbox"/> $(\Phi^T\Phi)^{-1}\Phi^T y$ | (d) <input type="checkbox"/> $(\Phi\Phi^T)^{-1}\Phi^T y$ |
|-----------------------------------------------------------|-----------------------------------------------------------|----------------------------------------------------------|----------------------------------------------------------|

15. What is the minimizer of the function  $f : \mathbb{R}^n \rightarrow \mathbb{R}$ ,  $f(x) = \|b + B^T x\|_2^2$  (with  $B^T$  of rank  $n$ )? The answer is  $x^* = \dots$

- |                                                 |                                               |                                                  |                                                   |
|-------------------------------------------------|-----------------------------------------------|--------------------------------------------------|---------------------------------------------------|
| (a) <input type="checkbox"/> $(BB^T)^{-1}B^T b$ | (b) <input type="checkbox"/> $-(BB^T)^{-1}Bb$ | (c) <input type="checkbox"/> $(B^T B)^{-1}B^T b$ | (d) <input type="checkbox"/> $-(B^T B)^{-1}B^T b$ |
|-------------------------------------------------|-----------------------------------------------|--------------------------------------------------|---------------------------------------------------|

16. For a matrix  $\Phi \in \mathbb{R}^{N \times d}$  with rank  $d$  (and  $N \geq d$ ), what is its pseudo-inverse  $\Phi^+$  ?

- |                                                        |                                                      |                                                        |                                                      |
|--------------------------------------------------------|------------------------------------------------------|--------------------------------------------------------|------------------------------------------------------|
| (a) <input type="checkbox"/> $(\Phi\Phi^T)^{-1}\Phi^T$ | (b) <input type="checkbox"/> $(\Phi\Phi^T)^{-1}\Phi$ | (c) <input type="checkbox"/> $(\Phi^T\Phi)^{-1}\Phi^T$ | (d) <input type="checkbox"/> $(\Phi^T\Phi)^{-1}\Phi$ |
|--------------------------------------------------------|------------------------------------------------------|--------------------------------------------------------|------------------------------------------------------|

17. Given a sequence of numbers  $y(1), \dots, y(N)$ , what is the minimizer  $\theta^*$  of the function  $f(\theta) = \sum_{k=1}^N (y(k) - \theta)^2$  ?

- |                                                                |                                                            |                                                                  |                                                            |
|----------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------------|------------------------------------------------------------|
| (a) <input type="checkbox"/> $\frac{1}{N} \sum_{k=1}^N y(k)^2$ | (b) <input type="checkbox"/> $\frac{\sum_{k=1}^N y(k)}{N}$ | (c) <input type="checkbox"/> $\frac{1}{N^2} \sum_{k=1}^N y(k)^2$ | (d) <input type="checkbox"/> $\frac{N}{\sum_{k=1}^N y(k)}$ |
|----------------------------------------------------------------|------------------------------------------------------------|------------------------------------------------------------------|------------------------------------------------------------|

18. What does “i.i.d.” stand for?

- |                                                                |                                                                  |
|----------------------------------------------------------------|------------------------------------------------------------------|
| (a) <input type="checkbox"/> infinite identically disturbed    | (b) <input type="checkbox"/> infinite identically dependent      |
| (c) <input type="checkbox"/> independent identically disturbed | (d) <input type="checkbox"/> independent identically distributed |

19. Given a sequence of i.i.d. scalar random variables  $X(1), \dots, X(N)$ , each with mean  $\mu$  and variance  $\sigma^2$ , what is the expected value of their arithmetic mean, i.e. of the random variable  $Y$  defined by  $Y = \frac{1}{N} \sum_{k=1}^N X(k)$  ?

- |                                    |                                              |                                                     |                                                            |
|------------------------------------|----------------------------------------------|-----------------------------------------------------|------------------------------------------------------------|
| (a) <input type="checkbox"/> $\mu$ | (b) <input type="checkbox"/> $\frac{\mu}{N}$ | (c) <input type="checkbox"/> $\frac{\mu}{\sigma^2}$ | (d) <input type="checkbox"/> $\frac{\mu}{\sqrt{\sigma^2}}$ |
|------------------------------------|----------------------------------------------|-----------------------------------------------------|------------------------------------------------------------|

20. In Question ??, what is the variance of the variable  $Y$  ?

- |                                                 |                                                   |                                                     |                                                   |
|-------------------------------------------------|---------------------------------------------------|-----------------------------------------------------|---------------------------------------------------|
| (a) <input type="checkbox"/> $\frac{\sigma}{N}$ | (b) <input type="checkbox"/> $\frac{\sigma}{N-1}$ | (c) <input type="checkbox"/> $\frac{\sigma^2}{N^2}$ | (d) <input type="checkbox"/> $\frac{\sigma^2}{N}$ |
|-------------------------------------------------|---------------------------------------------------|-----------------------------------------------------|---------------------------------------------------|

21. Given a prediction model  $y(k) = \theta_1 + \theta_2 x(k)^2 + \epsilon(k)$  with unknown parameter vector  $\theta = (\theta_1, \theta_2)^T$ , and assuming i.i.d. noise  $\epsilon(k)$  with zero mean, and given a sequence of  $N$  scalar input and output measurements  $x(1), \dots, x(N)$  and  $y(1), \dots, y(N)$ , we want to compute the linear least squares (LLS) estimate  $\hat{\theta}_N$  by minimizing the function  $f(\theta) = \|y_N - \Phi_N \theta\|_2^2$ . If  $y_N = (y(1), \dots, y(N))^T$ , how do we need to choose the matrix  $\Phi_N \in \mathbb{R}^{N \times 2}$  ?

- |                                                                                                          |                                                                                                          |                                                                                                      |                                                                                                        |
|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| (a) <input type="checkbox"/> $\begin{bmatrix} x(1)^2 & 1 \\ \vdots & \vdots \\ x(1)^2 & 1 \end{bmatrix}$ | (b) <input type="checkbox"/> $\begin{bmatrix} 1 & x(1)^2 \\ \vdots & \vdots \\ 1 & x(N)^2 \end{bmatrix}$ | (c) <input type="checkbox"/> $\begin{bmatrix} 1 & x(1) \\ \vdots & \vdots \\ 1 & x(N) \end{bmatrix}$ | (d) <input type="checkbox"/> $\begin{bmatrix} 1 & -x(1) \\ \vdots & \vdots \\ 1 & -x(N) \end{bmatrix}$ |
|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
