

# MSc project

## Optimal Control in Movement Neuroscience

A multi-disciplinary project at the interface between brain science, computer science and engineering.

The aim of the project is to understand motor control and motor learning in humans using optimal control and dynamic programming approaches.

We are looking for MSc students from Embedded / Microsystems Engineering,  
Computer Science,  
or Biology.

The project is jointly supervised by the groups of Prof. Moritz Diehl (IMTEK) and Prof. Carsten Mehring (Bernstein Center Freiburg).

If you are interested, please contact Prof. Diehl and/or Prof. Mehring:
